Exploratory versus explanatory

- Easily-generated
- Data-heavy
- Small specialist audience (yourself/colleagues)
- Graphical data analysis.

- Labor-intensive
- Data-specific
- Broader audience (publications or presentations)
- Part of the communications process.

A Few Lessons from Knafllic (2015)

1

Understand the
context

2

Choose an
appropriate
visual display

3

Eliminate
clutter

4

Focus attention
where you
want it

5

Think like a
designer

6

Tell a story

The importance of context

- Who, what, and how
- **Who** is your audience?
- **What** do you need them to know or do?
- **How** can you use data to help make your point?
- Understand the situational context:
 - Audience
 - Communication mechanism
 - Desired tone

Easy for our eyes to read

Always have a zero baseline

Non-zero baseline: as originally graphed

IF BUSH TAX CUTS EXPIRE
TOP TAX RATE

Zero baseline: as it should be graphed

IF BUSH TAX CUTS EXPIRE
TOP TAX RATE

Pie charts are evil

Supplier Market Share

Which is largest?

If you had to estimate by what proportion, what percent would that be?

Pie charts are evil

Supplier Market Share

Hard to read

If you *really* want to use pie charts, add data labels

Use bar chart instead

Supplier Market Share

Pie charts are evil

PRE: How do you feel about doing science?

■ Bored ■ Not great ■ OK ■ Kind of interested ■ Excited

POST: How do you feel about doing science?

■ Bored ■ Not great ■ OK ■ Kind of interested ■ Excited

Pilot program was a success

How do you feel about science?

BEFORE program, the majority of children felt just *OK* about science.

Don't use the donut chart

The donut chart

Hard to estimate quantities

Barrett Thomas

Useful for showing relationship between two things

Wilkinson's grammar of graphics

❑ *Data*

- A set of data operations that create variables from datasets

❑ *Trans*

- Variable transformations

❑ *Scale*

- Scale transformations

❑ *Coord*

- A coordinate system

❑ *Element*

- Graph and its aesthetic attributes

❑ *Guide*

- One or more guides

ggplot2

- An implementation of the grammar of graphics in R
- The grammar describes the structure of a graphic
- A graphic is a mapping of data to a visual representation
- [ggplot2](#)

ggplot2

- One of the packages in the tidyverse.
- Enables the “static” visualization of data.

```
library(tidyverse) # load package
library(readxl)

CoffeeChain <- read_excel("CoffeeChain.xlsx")

ggplot(data = CoffeeChain, aes(x = Sales, y = Profit)) +
  geom_point() +
  theme_bw()
```

Points – scatterplot in R

Useful for showing relationship between two things

Is there a positive relationship between sales and profit?

Lines in R

Most used to plot continuous data

Has profit changed over time?

```
ggplot(CoffeeChain, aes(x = Date, y = Profit)) +  
  geom_smooth() + theme_bw()
```

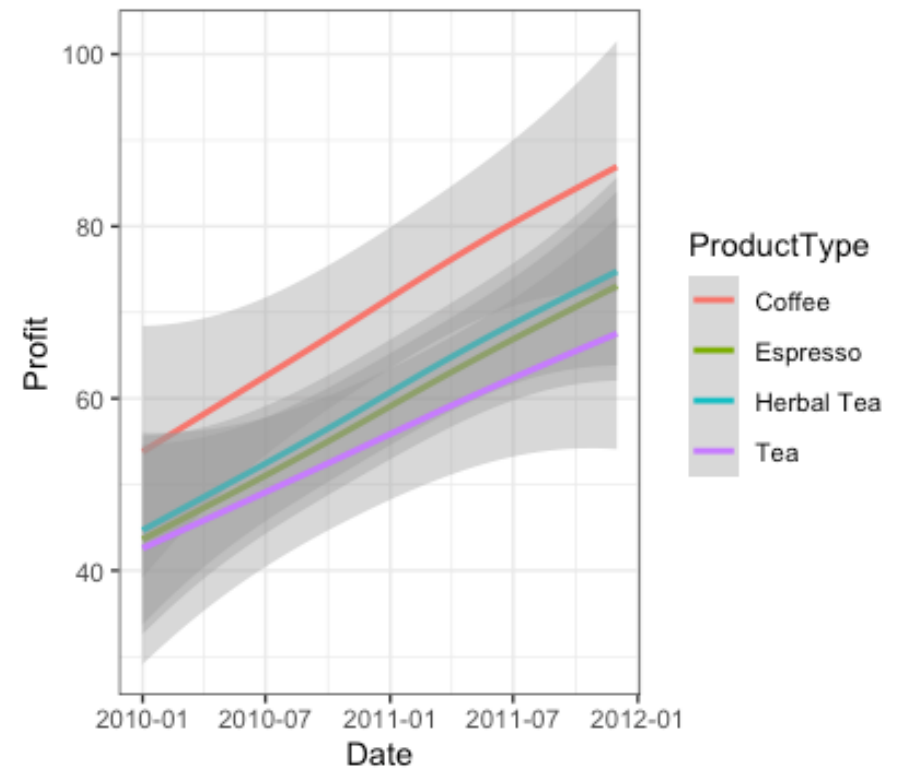

Lines in R

Most used to plot continuous data

Has profit changed over time?

```
ggplot(CoffeeChain, aes(x = Date, y = Profit, color = ProductType)) +  
  geom_smooth() + theme_bw()
```

Bars in R

Easy for our eyes to read

How many products
do we have for each
type of product?

```
ggplot(CoffeeChain, aes(x =  
ProductType)) +  
  geom_bar() + theme_bw()
```

Bars in R

Easy for our eyes to read

What products and how many of them do we have for every type of product?

```
ggplot(CoffeeChain, aes(x =  
ProductType, fill = Product)) +  
  geom_bar() + theme_bw()
```

Challenge

- Stack bars next to each other
- See:
https://ggplot2.tidyverse.org/reference/position_dodge.html

A couple of notes in ggplot2

Many extensions available – the sky is the limit!
